

Internet in Space with TDRSS

Operating Missions as Nodes on the Internet (OMNI)

Overview

- **Jan 1998-Jan 1999 - Proof-of-Concept prototype for a mobile spacecraft that demonstrates IP communication through an ADTECH channel simulator.**
- **Feb-Apr 1999 - Build on SPTR modifications in WSC to perform satellite-like operational demonstrations of IP communication through TDRSS to mobile spacecraft simulator (OMNI van)**
- **August 11,1999 - Webcast total solar eclipse worldwide from a ship in the Black Sea via TDRSS**
- **Nov. 1999 - Demonstrations of data, images, voice, email, streaming video through TDRSS to booth in JSC Mission Control for Inspection Day 1999**

End-to-End IP Communication Prototype

OMNI Van Applications

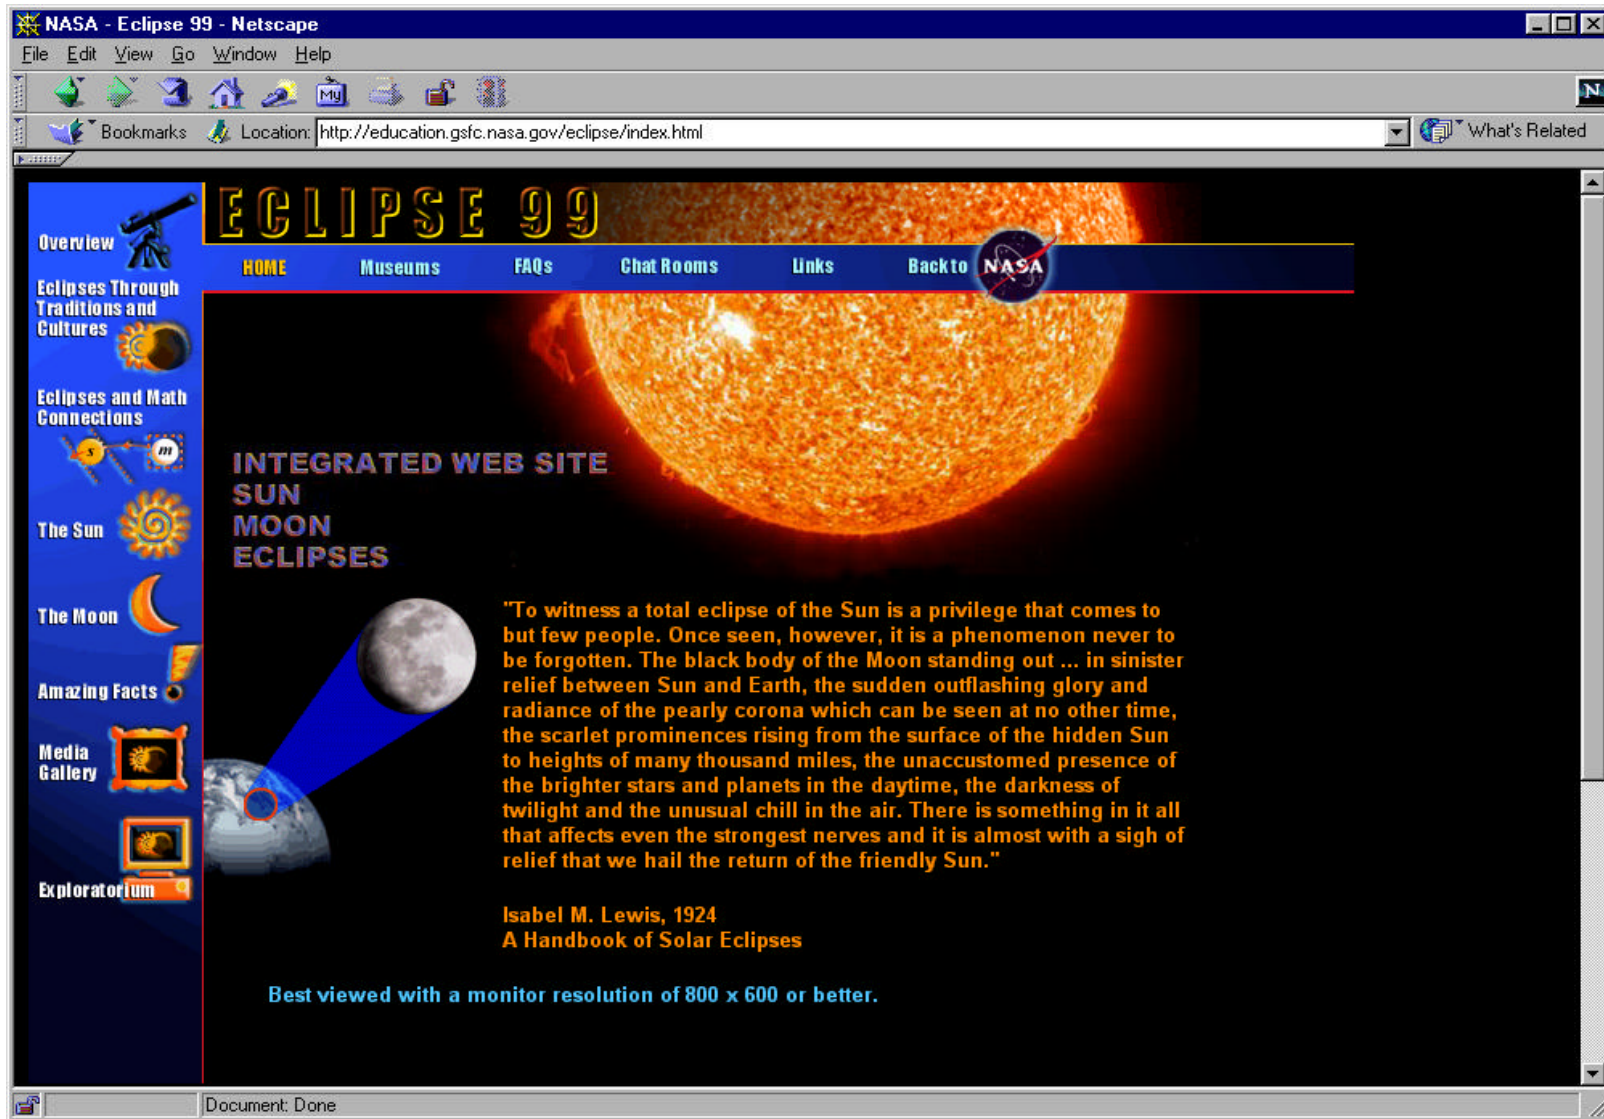

- **OMNI weather, GPS, images**
 - Real-time data sent by UDP/IP
 - Playback data sent by FTP/TCP/IP
- **Blind commanding using UDP/IP**
- **HTTP access to camera server for configuration and commanding**
- **Telnet from Lab to the prototype spacecraft**
 - Upload and run new software
 - Reliable commanding
- **NFS file transfer from prototype spacecraft**
- **FTP transfer starting on one TDRSS link and finishing on another**
- **Secure VPN link from OMNI Van to Lab**
- **TDRSS links using 2-way SSA, 2-way MA, and return-only MA**

IP Demo Prototype In Real Life

Eclipse 99 Applications

- **OMNI weather, GPS, images**
- **Web browser on ship used to check weather forecasts and the OMNI web site**
- **Iphone used for Voice over IP audio conversations between GSFC and the ship**
- **AOL Instant Messenger from ship to participating museums**
- **Email from ship to anywhere**
- **Telnet from ship to anywhere**
- **RealVideo from ship to Ames server for streaming video**

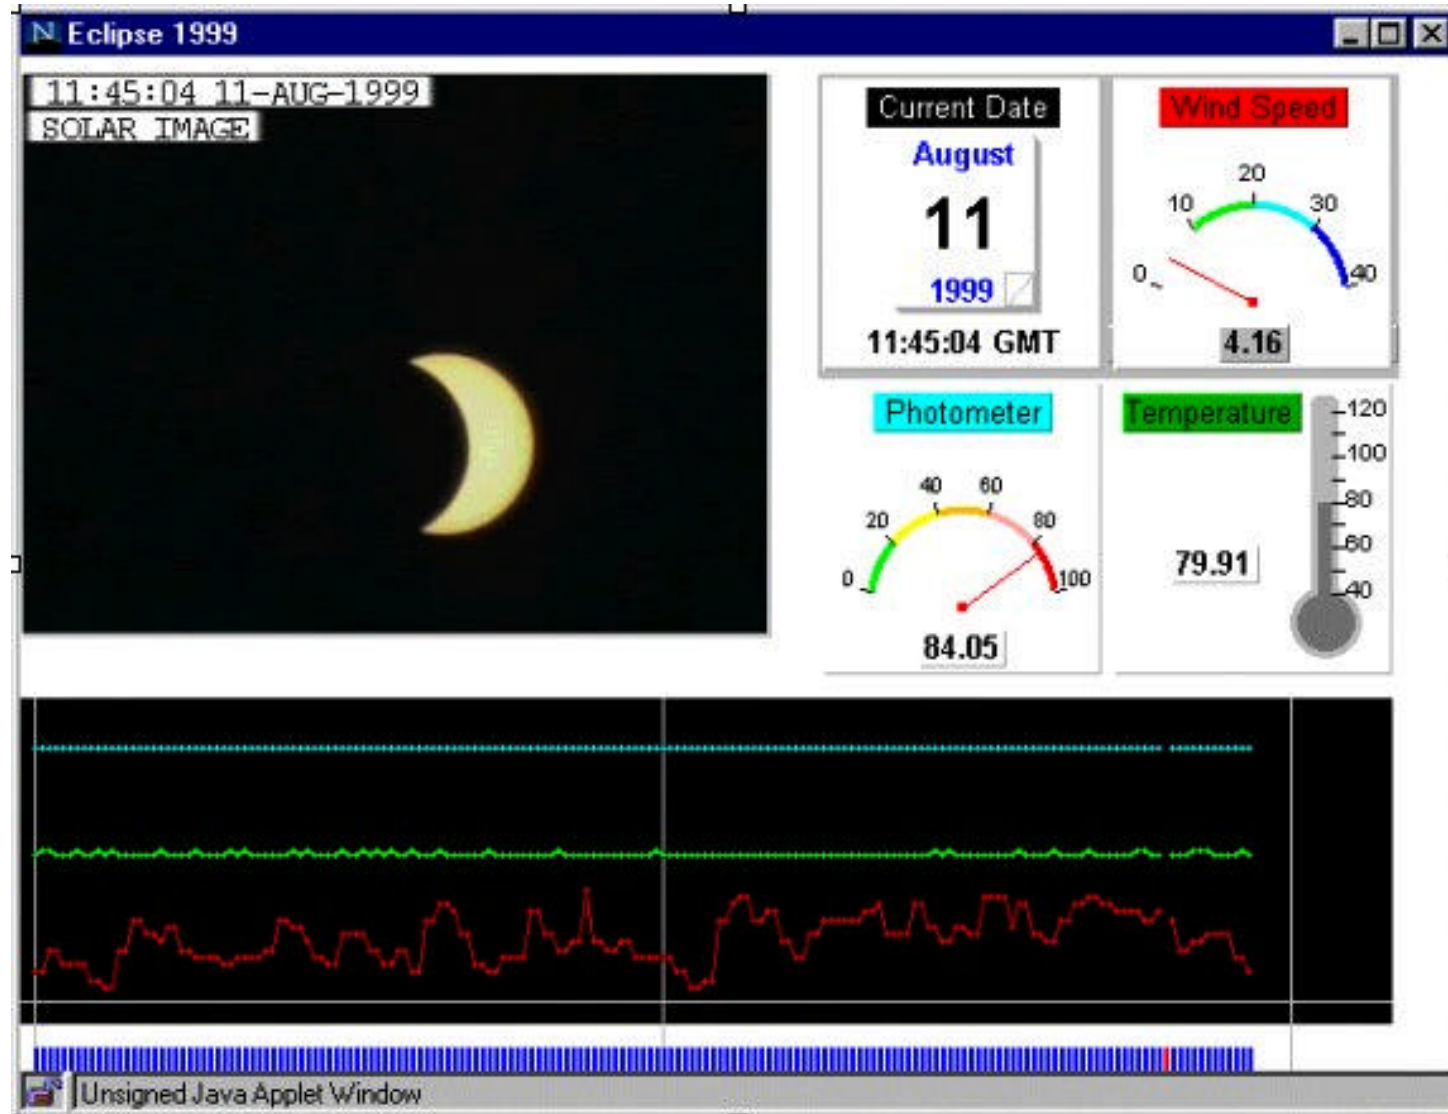

GPS Data Display Applet

Eclipse Display Applet

Eclipse Day Events!

"Remote scientists" at the Maryland Science Center

Participating Museums

- Air and Space Museum
- Maryland Science Center
- Exploratorium
- Lawrence Hall of Science
- Coca Cola Space Science Center
- St. Louis Science Center
- Rochester Museum of Science
- Denver Museum of Natural History
- Science Center of West Virginia

"Flight Crew" on-board the ship

"Flight Control Team" at GSFC

Web Activity

- 7.5M hits Eclipse day
- .5M hits at Eclipse hour
- > 2000 Data/image streams

Inspection Day '99 Applications

- **OMNI weather, GPS, images**
- **Audio/Video Tours of Goddard**
- **Downloaded demo copy of Iphone using web browser in van via TDRSS**
- **Iphone used for Voice over IP audio conversations between GSFC and JSC**
- **Email from van to anywhere**
- **Telnet from van to OMNI web server to edit web pages**
- **RealVideo from van to GSFC for streaming video**

ID '99 - JSC Mission Control Center

Summary

- **Internet Protocols worked over a geosynchronous link**
- **UDP/IP worked for return-only one-way links, which are identical to those used by current spacecraft**
- **Internet protocols operated over the same RF links as current TDM and CCSDS protocols**
- **Tested wide variety of UDP/IP and TCP/IP applications with no additional TDRSS/WSC modifications needed**
- **Implemented our systems with standard COTS network equipment and software**
